

# Japanese encephalitis (JE)

There is **no cure** for this life-altering disease – prevent the bite that can ruin a life<sup>1</sup>

## 3 reasons why JE is a deadly threat

1

### JE is one of the **deadliest** vaccine-preventable diseases<sup>1,2</sup>

Up to **30%** of people who develop JE die. For those who survive, up to **50%** are left with chronic neurologic, cognitive, and behavioral disabilities.<sup>1,3</sup>

**The consequences of JE are devastating, and survivors may never fully recover.**

2

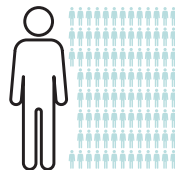

### JE is endemic in **25 countries**<sup>4</sup>

JE is present across Asia and Southeast Asia, as well as parts of the Western Pacific, including Australia. The risk is **unpredictable** – you can't know when or where an infected mosquito will bite, even on a short trip abroad.<sup>1,5</sup>

3

### **Less than 1%** of travelers know about JE<sup>6</sup>

Mosquitoes are a silent threat you may not see coming – but all it takes is one bite that can cause JE infection.<sup>1</sup>

Scan the QR code and hear from real patients who have suffered from JE.
